- The net open short-term IR position arising from on-balance sheet items reflects BSF's corporate DNA (excess of floating rate assets).
- BSF mitigates its IR risk exposure through a combination of on-and off-balance sheet instruments, incl. cash-flow hedges. The CFH outstanding position is driven by the evolution of BSF's balance sheet structure, IR risk appetite & structural market trends.
- The notional amount of cash flow hedges declined by 14% year-over-year, driven by an increase in fixed investments, which has resulted in a natural hedge to mitigate interest rate risk.
